

# Project Profile

## Broadview Road (North) Improvements - LPA

Year:  
2010-2011

Client  
City of Broadview Heights

Location  
Broadview Heights, OH

### Project Scope:

Widening of Broadview Road from two lanes to three lanes at the intersections of Royalwood Road and Tollis Parkway, a proposed 5-foot bike lane will be constructed on both sides of the road. Planing and resurfacing existing Broadview Road from approximately 1,000 feet north of S.R. 82 to Sprague Road.

During construction, a non-project related gas line installation damaged an existing 12" water main, causing significant damage to 1,000 lf of the newly installed intermediate course, and closed the roadway to traffic. QCI coordinated the emergency remediation of the pavement with the City and Contractor.

Due to the high traffic volume associated with Broadview Road, QCI worked with the contractor and engineer to explore alternate construction methodologies and detour options to minimize the impacts to the traveling public.

### Project Services:

- Provided Construction Project Engineer services in accordance with LPA requirements
- Provided Inspection Services.
- General project oversight for contract compliance.
- Managed and tracked pay items.
- Coordinated \$200K pavement remediation work associated with water main damage.

Cost:  
\$ 1.6 M
